

## Activity 1 CSS

Name : Aman Izardar M.tech CSE 1<sup>st</sup> year

Enroll No : 2021201028

A :

- Name: Aman Izardar
- Program : M.tech CSE 1<sup>st</sup> YEAR
- Why Taking Course : To take an overview of the current opportunities and the omnipresent reach of computational social science.
- What do you want to get out of the class : to learn how to use research, data science and programming skills to understand and solve complex problems and to work with stakeholders and clients to tackle real societal problems.

B:

- AI-based systems are (often without our knowledge) making decisions about who gets housing, or a car loan—or a job.
- In a lot of cases, the people affected by these decisions don't even know the criteria used by the software to adjudicate their lives.
- A small but disturbing scene in London sees the police harassing and eventually charging an old man who while walking down the street, pulled up his jacket to conceal his face from a facial recognition camera.
- Even though Kantayya follows three characters – besides interviewing other experts and splicing archival footage – *Coded Bias* doesn't have a dense plot. It often relies on explaining key information, making it talk-heavy. Some of it seems repetitive.
